ELECTRIC POWER IMPROVEMENTS

A new electric power plant has just been put into operation at Kotor in Montenegro. Work has begun on a long-distance power line from Kotor to Ulcinj, and the first 20 kilometers of this line will be in service within a few days. Work is now in progress on the section of the line between Budva and Ulcinj. Poles have been distributed along the entire route, and they will be set up within a few days. Transformer stations will be built at the same time.

NEW POWER SOURCE IN BOSNIAN MINE -- Politika, No 13245, 23 May 49

In the past the mine has not had sufficient electric power. This has made mechanization difficult, and sufficient quantities of compressed air have not been available for mine operations. The new turbine will correct these conditions, supply Prijedor with more power, and make the electrification of neighboring villages possible.
